What does this regexp mean - `<p {Lu}>`? Asked 11 years, 3 months ago Modified 10 years, 1 month ago Viewed 27k times

The `<p>` tag is a paragraph, and as such, it is a block element (as is, for instance, `h1` and `div`), whereas `span` is an inline element (as, for instance, `b` and `a`) Block elements by ...

What is the difference between `<p>` and `<div>`? Can they be used interchangeably? What are the applications?

I am still struggling to understand the difference between `*p`, `&p`, and `p`. From my understanding, `*` can be thought of as "value pointed by", and `&` as "address of". In other words, `*` ...

What does `/p` stand for in `set /p=`? I know that `/` enables a switch, and I'm fairly sure that I know `/a` is for arithmetic. I've heard numerous rumours, some saying `/p` is for prompt, ...

If this is what you are asking, `%p` and `%Fp` print out a pointer, specifically the address to which the pointer refers, and since it is printing out a part of your computer's ...

I'm confused about what the `-p` option does in Unix. I used it for a lab assignment while creating a subdirectory and then another subdirectory within that one. It looked like this: `mkdir -p ...`

Learn when to use `<p>` for paragraphs and `<br>` for line breaks in HTML on Stack Overflow.

I would say the second one, than the `<p>` is not inheriting attributes of `<a>` and keeping it's original formatting.
