If a function is constructable, it can be called with new, i.e. new User(). If a function is callable, it can be called without new (i.e. normal function call). Functions created through function ...

A function is outside the namespace of the rest of the program. It is like a separate program that can have the same variable names as used in the calling program, and whatever it does to ...

A callback function is a function which is: accessible by another function, and is invoked after the first function if that first function completes A nice way of imagining how a ...

Correction suggested by Guffa: The function is executed right after it's created, not after it is parsed. The entire script block is parsed before any code in it is executed. Also, parsing code ...

357 Function pointers in C can be used to perform object-oriented programming in C. For example, the following lines is written in C:

508 It's all about variable scoping. Variables declared in the self executing function are, by default, only available to code within the self executing function. This allows code to be written without ...

LINE 1: select f(1); ^ HINT: No function matches the given name and argument types. You might need to add explicit type casts. because there is no f() function that takes an integer as ...

About __func__: "The identifier __func__ is implicitly declared by the translator as if, immediately following the opening brace of each function definition, the declaration: static ...

I have a function whose structure is similar to the above. I want to abstract task 3 into a function, bar(), but I
